Repeat after 12 to 16 weeks if needed.</p> <p>WHEN TO APPLY Apply <i>Esteem</i> Ant Bait in the early Spring or Summer at the first sign of ant activity. Applications may be made any time of the day but are more effective when ants are actively foraging, usually when the soil temperature is above 60° F. Avoid application if rain is expected within 4 to 6 hours. Do not water treated area for 24 hours after application. In the event of prolonged rains after initial treatment, reapplication may be necessary.</p> <p>(Special Instructions continued on next page).</p>

SPECIAL INSTRUCTIONS (continued from previous page)

A second application of *Esteem* Ant Bait may be advisable after 12 to 16 weeks in areas of heavy infestations, or when the mounds remain active, or when a reinfestation occurs. In large mounds, some worker ants may persist for a while after the queen is dead. For 7 to 10 days after treatment, do not apply any other ant pesticide. This is to allow sufficient time for the worker ants to seek out the bait and take it back to the mound. After 14 days, it may be desirable to apply a registered ant pesticide to kill remaining foraging ants.

Bearing Almond Timing: In bearing almond orchards apply at 6 to 8 weeks prior to harvest to protect fallen nuts. Repeat after 12 to 16 weeks if needed.

Individual Mound Treatment: Apply 2 to 4 level Tbsps of *Esteem* Ant Bait per mound, uniformly distributing material 3 to 4 ft around the mound. Do not disturb the mound. Do not apply to top of mounds. Repeat after 12 to 16 weeks if needed.

- For all crops except Pasture Grass and Rangeland do not apply within 24 hours of harvest.
- Regardless of formulation, the maximum amount of pyriproxyfen that may be applied per acre per season is as follows:
