**GRANULAR REPELLENT**

**Guaranteed to Work!**

NET WT. 6 lbs. (2.72kg)

CAUTION: KEEP OUT OF REACH OF CHILDREN

## VOLE SCRAM™

**GRANULAR REPELLENT**

### What You Should Know About the Vole

Voles are also called meadow mice or field mice. There are 23 vole species in the United States. Voles are compact rodents 5"-8" long with stocky bodies, short legs, & short tails. Their eyes are small & their ears partially hidden. They usually are brown or gray, though many color variations exist.

Voles prefer areas with heavy ground cover of grasses, grass-like plants, or litter. Voles eat a wide variety of plants, most frequently grasses and roots. They eat bark at times, primarily fall and winter.

Voles are active day & night, year round. They do not hibernate. Home range is usually 1/4 acre or less. Voles construct many tunnels and surface runways with numerous burrow entrances. Voles may breed throughout the year, but most commonly in spring and summer. Vole life spans are short, ranging from 2 to 16 months.

EPIC's all-natural repellent contains a blend of more active ingredients that make it stronger than other repellents which use just castor oil. While Vole Scram™ is fast acting, it may take a few days for voles to leave the treated areas. Vole Scram is both organic and biodegradable and will naturally break down over time.

Voles feed on above and below ground plant parts such as foliage, seeds, stems, roots and bulbs. Voles can ruin lawns, golf courses, and ground covers through feeding and when they build extensive runway and tunnel systems. Voles can pose a problem for your lawn, wooded landscapes, plants and bulb gardens.

Voles may cause extensive damage due to their girdling of seedlings and mature trees. Girdling damage usually occurs in fall and winter. Voles often live along with moles and travel in mole tunnels and runs. Moles do not eat plant material. Voles do. Moles burrow and make unsightly dirt mounds in turf but will not damage plants by feeding. Voles are likely responsible for most feeding damage in your garden and landscape plants - not the moles. Moles feed on insects, earthworms and other soil invertebrates. If you have mole damage indicated by volcano shaped mounds, use Mole Scram™ to get rid of moles first. Then apply Vole Scram™ to get rid of voles and plant damage.

Recommended Spreader Settings will give 1 lb per 600 sq feet 1 Bag protects approx. 3,600 square feet

SPREADER SETTINGS:	
Settings will give	
Earthway Broadcast	20
EX Broadcast Republic	9
Quaker Broadcast	5
Red Devil	18
Scott Easy Green	27
Scott Speedy Green	8

APPLICATION INSTRUCTIONS: Apply using a rotary spreader at a rate of one pound per 600 square feet. Cover the area where vole damage has been observed and/or is occurring. Extend the coverage to about thirty (30) feet around and beyond the damaged area. For lawn and garden areas of 5,000 or less square feet, we recommend covering the entire area. Hand sprinkle, using the scoop provided, within damaged garden plots and beds.

Water the affected area where Vole Scram has been sprinkled or spread for approximately 5 minutes.

Reapply Vole Scram in 14 days after the initial application and then every 30 days or as needed. Heavy or extended periods of rainfall will shorten the effective period.

PRECAUTIONARY STATEMENTS: Wash skin after use. Avoid contact with eyes or cuts. If in eyes, flush with water for 15-20 minutes. Call Poison Center or doctor for treatment.

STORAGE: Store away from direct sunlight or excessive heat. Do not contaminate water, food or feed by storage or disposal. Do not apply directly to water. Dispose of properly. Buyer assumes all responsibility for safety and use not in accordance with directions.

FOR OUTDOOR USE ONLY

Active Ingredients:	
Castor Oil	5.50%
Thyme Oil	1.00%
